

ICT 7, 9 TERM 3 Study Guide

Your Term 3 test is similar to the prior tests. You will be given instructions to manage a database. You will use the same skills and techniques you learned and practiced in class.

The **best** way to study for the exam is to practice the tools in the tutorial! Here is how you can do that:

- Create a database from scratch
- populate it
- select from it
- insert into it
- delete rows
- update records

If you can accomplish the tasks in the tutorial without using the help key or other resources, you will make a 100% on the Term Test.

You will not be able to use notes or other materials on your test.
