

Science 6 TERM 3 Study Guide

On the unit test, you can expect to have not less than two essay questions, not less than 6 short answer questions, and identification/matching/multiple choice/fill in the blank questions to total 100 points.

For the test for Term 3, you should be able to answer multiple choice and matching questions. You should also be able to take knowledge you have gained in class and apply it in situations similar to those used as examples in class.

You should review the learning objectives for each lesson. If you can accurately and completely answer those objectives, you will have no problem on your Term 3 Test.

Additionally, specific topics include:

- Topics in electromagnets, magnetic fields
- You may have a question or two on the difference between parallel and series circuits as well as open, short, and closed circuits
- Topics in forces, buoyancy, friction, density, energy.

You will not be able to use notes or other materials on your test.

You will have at least two questions requiring an essay-style response, written in complete sentences and paragraph form. Any essay questions **MUST** include pre-writing, and this planning **MUST** be in the area provided. You will also have at least 6 short-answer questions which must be written in complete sentences.

The exam will be split into two sections: the first, including multiple choice, identification, short answer, and diagrams will be prior to lunch, the second part, including essays, will be after lunch.
